WHO SHOULD ATTEND

Production Managers, Executives, Senior Supervisors, Supervisors & Line Leaders who are responsible for manufacturing.

METHODOLOGY

Lecture, Group discussion & activity, Video presentation.

PROGRAM INTRODUCTION

Production is a process whereby raw material is converted into semi-finished products and thereby adds to the value of utility of products, which can be measured as the difference between the value of inputs and value of outputs. Production function encompasses the activities of procurement, allocation and utilization of resources.

The main objective of production function is to produce the goods and services demanded by the customers in the most efficient and economical way. Therefore efficient management of the production function is of utmost importance in order to achieve this objective.

Production Planning and Control (PPC) is defined as the planning, direction and coordination of the firm's material and physical facilities towards the attainment of predetermined production objectives in the most economical manner.

Production Planning and control is referred to as operations planning and control because the production planning and control techniques used in production system manufacturing tangible goods can also be employed in operations or service system providing services.

LEARNING OBJECTIVES

At the end of this 2-days programme, participants should be able to understand:

- To explain a comprehensive overview of the various aspects of operation
